

A

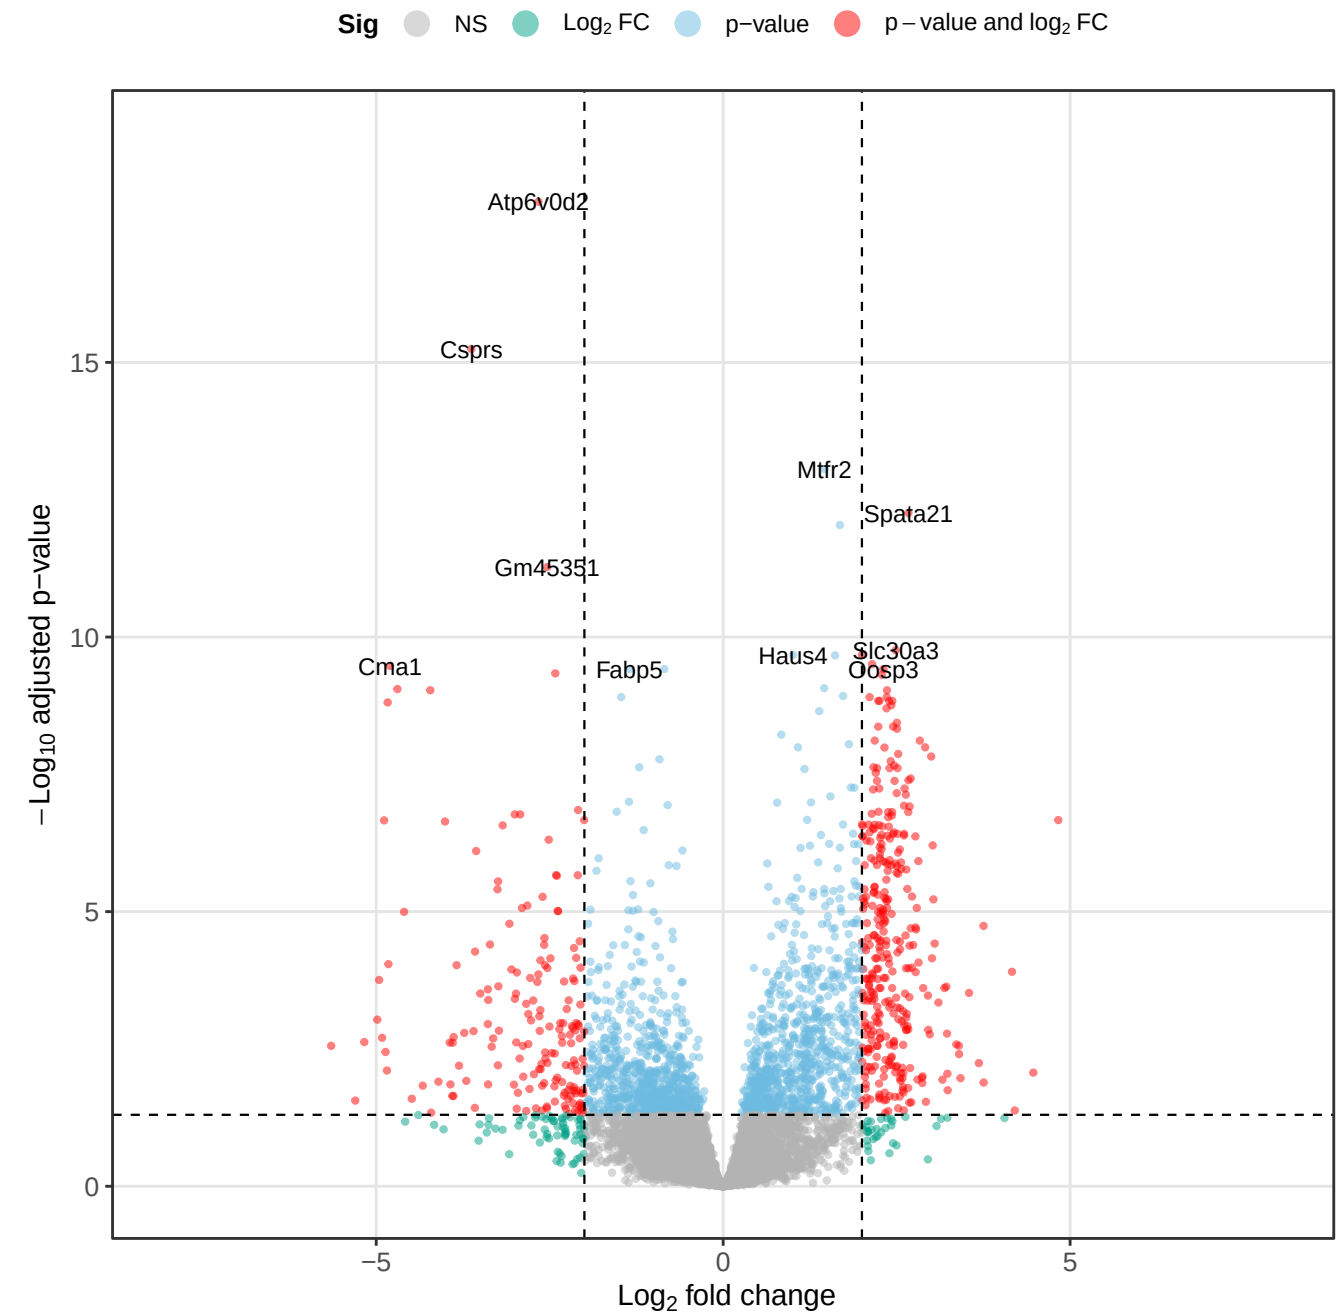

Principal Component Analysis

B

Differentially Expressed Genes

adj. p < 0.05 | |log₂FC| > 2

C DESeq2 Summary

Metric [†]	Count
Total genes tested	15999
Significant (padj < 0.05)	2010
Upregulated in old (padj < 0.05)	1126
Downregulated in old (padj < 0.05)	884
log ₂ FC > 2 and padj < 0.05	508

[†] Significance thresholds: adjusted p-value < 0.05 (Benjamini-Hochberg); |log₂FC| > 2

Figure X. Transcriptomic characterisation of ovarian ageing in the mouse. (A) PCA of regularised log-transformed RNA-seq values across eight ovarian samples. (B) Volcano plot of DESeq2 differential expression results (old vs young, n = 4 per group). (C) Summary of differential ex
